Drive File Stream

GSuite for Business

**Google Drive File Stream** is a desktop application that allows you to quickly access all of your Google Drive files on demand, directly from your computer **without losing precious drive space**.

Existing Cloud Services like Box, Dropbox, etc, uses up the same amount of space on your Hard Drive as it does on the Online Service.  E.g. If you have a 5GB Space online you will use the same space on your Hard Disk.

# HOW DOES IT WORK?

Drive File Stream

GSuite for Business

**File Stream** is an application that lets you stream My Drive and Team Drive files directly from the cloud, which in turn:

- Allows quick access to all of your Google Drive files on demand, directly from your computer
- Frees up disk space and network bandwidth
- Decreases sync time
- Minimizes the amount of company data stored on users' hard drives
- Browse and organize Google Drive files without downloading all of them to your computer
- Choose which files or folders you'd like to make available offline
- Share files with anyone for collaboration
- Open files in common apps like Microsoft Office and Adobe Photoshop

Drive File Stream

GSuite for Business

You stream your Drive files directly from the cloud to your Machine, freeing up disk space and network bandwidth. Because Drive files are stored in the cloud, any changes you or your collaborators make are automatically updated everywhere. You'll always have the latest version.

You can also make Drive files available for offline access. These cached files sync back to the cloud when you're online, so the latest version is available on all your devices.

You can also make Drive files available for offline access. These cached files sync back to the cloud when you're online, so the latest version is available on all your devices.

# OFFLINE AVAILABILITY?

Drive File Stream

GSuite for Business

With Drive File Stream, you can make selected Drive files available for offline use.

By default, Google Drive File Stream does not store a copy of your files on your local computer. This means that if you do not have an Internet connection, you will not be able to access these files. In order make your files accessible offline, right-click on a file or folder and select **Available Offline** under the **Drive File Stream** menu. These cached files sync back to the cloud when you're online, so the latest version is available on all your devices.

Please note that doing so will store a copy on your computer, using up more of your hard drive space.

# RECOMMENDATIONS..

Drive File Stream

GSuite for Business

Use as an **Archive**

Work towards keeping your Immediate required files ‘Offline’ and Keep your Older Files ‘Online’

It becomes a constant File Backup Option.
